QA Testing

Our QA team carry out inspections at each stage of the manufacturing process to ensure your Stainless Steel Tank is built to our exacting standards. QA personnel are also available for Inspections & Maintenance on your site, as one element of the Furphy Engineering After-Sales-Service-Program.

Australian & International Standards

Our Design Team use a range of Australian and International Standards when designing your Tank to ensure we are benchmarking and engineering to local and international best practice. Our Engineering personnel are available for further Consultation & Trouble Shooting throughout the life of your Tank installation, as part of the Furphy Engineering Asset Management Program.
